- Richard J. Roberts

Background

The National Drug and Alcohol Research Centre (NDARC) is a premier research institution in Australia and is recognised internationally as a Research Centre of Excellence. The Centre is multidisciplinary and collaborates with medicine, psychology, social science and other schools of the University of NSW, as well as with a range of other institutions and individuals in Australia and overseas.

The overall mission of NDARC is to conduct high quality research and related activities that increases the effectiveness of Australian and International treatment and other intervention responses to alcohol and other

drug related harm.

In addition to the research conducted at the Centre, other NDARC activities include an Annual Symposium and a range of special conferences and educational workshops. As well as contributing to scientific journals and other publications, NDARC produces its own Research Monographs and Technical Report Series. In conjunction with the National Drug

Mission Statement

The overall mission on NDARC is: to conduct high quality research and related activities that increases the effectiveness of the Australian and International treatment and other intervention responses to alcohol and other drug related harm.

In order to increase the effectiveness of the Australian treatment response to drug problems four goals need to be met:

1. the harms to which treatment should be directed need to be known;
2. effective treatments should be available for responding to these harms;
3. those providing treatment should be aware of which treatments are effective; and
4. those who suffer the harms for which the treatments are intended should be made aware of ways in which to minimise harm, and of the availability of effective forms of treatment.

Key Goals

1. to improve our understanding of the nature and extent of alcohol and other drug-related harms to which treatment and other interventions should be directed;
2. to increase knowledge on the range and effectiveness of treatment and other interventions that is aimed at reducing forms of alcohol and other drug related harm;
3. to increase knowledge among treatment and intervention providers about which programs are effective and which individuals are most suited to them;
4. to increase the community's knowledge of appropriate and effective treatment and other intervention programs for alcohol and drug-related problems.

Location

NDARC Groups

- Epidemiology identification of potential harms
- Health economics
- Drug market analysis and supply reduction
- Prevention and early interventions
- Treatment and other interventions
- Information and training
- Drug Policy Modelling Program
- International

Cannabis cohort research consortium (126)

Tags: cannabis, disease, drug

Date Commenced
NOV 2010

Date of Completion
expected on MAR 2011

Project Funding
NDARC

About the Project

Print this Page

Rational

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Pellentesque mauris felis, varius non fructuor sit amet, convallis et arcu. In ac magna sed augue tristique viverra ut ac orci. Curabitur aliquam nibh non magna dapibus sit amet dignissim eros porta.

Aims

The Consortium aims to foster relations among partners, identify limitations in knowledge on patterns and causes of cannabis use, potential harms and adverse outcomes, examine priority issues in an efficient and timely way through secondary data analysis of existing national and international cohorts; and, provide health and policy feedback to the commonwealth, health professionals and the public.

Design & Method

The consortium is a developing collaboration which stemmed from the need to better address pressing questions about the relationship between cannabis, other drug use, the course outcomes and mental health in children and young adults. Longitudinal cohort research provides the best available methodology for assessing these relationships. The Consortium aims to achieve its goals by involving partners in capacity building activities, and by providing capacity to allow collaborative work to proceed to high level grant application stage. Collaboration between researchers involved in existing cohorts allows for better assessments of relationships to be made, uses existing data more efficiently and increases opportunities for knowledge translation.

Progress

Mauris sed risu libero, eu auctor risu. Phasellus quis nulla neque, vitae lacina nunc. Curabitur ibendum massa arcu, nec sodales mi.

Benefits

Mauris sed risu libero, eu auctor risu. Phasellus quis nulla neque, vitae lacina nunc. Curabitur ibendum massa arcu, nec sodales mi.

Output

A pilot study has been completed which aimed to determine the feasibility of combining data from the Christchurch Health and Development Study (CHDS), the Mater University study of Pregnancy (MUSP) and the Victorian Adolescent Health Cohort Study (2,000 Stories), to potentially strengthen associations between early cannabis use and educational outcomes (Hawwood, J., Fergusson, D., Haythyaiah, M., Naiman, J., Coffey, C., Patton, G., Silim, E., Hutchinson, D. (2010). Cannabis use and educational achievement: Findings from three Australian cohort studies. Drug and Alcohol Dependence, 110, 247-253).

An additional paper assessed the evidence for a causal link between cannabis and psychosis (McLennan, J., Silim, E., Hutchinson, D., Matlock, R., Hall, W. (2010) Assessing evidence for a causal link between cannabis and psychosis: A review of cohort studies. International Journal of Drug Policy, 21, 10-19).

A paper is also in preparation which uses Structural Equation Modeling to examine potential reciprocal relationships between cannabis use and depression across several cohorts.

An NHMRC grant application was successful which will extend the work of the pilot study, due to commence in 2011. The CRCR was also involved in an unsuccessful but highly competitive bid for a Cooperative Research Centre for Young Australians (led by Prof Ann Sanson, with Prof George Patton co-leader of one of three research programs).

Additionally, based on how well the CRCR presents the theory and best practice of collaboration, the Consortium has been selected by ARACY as a case study of a 'network in action' and presented to ARACY members and others interested in collaboration management. A link to this case study can be found by [clicking here](#).

Adrenergic receptor activity suppresses ischaemia / reperfusion-induced Ins (1,4,5) P₃ generation in the mouse heart: a comparison with ischaemic preconditioning.
alpha1A- Clin Sci (Lond). 2008;114:157-64 [Annual Report](#)
Author: Amirahmadi F, Turnbull L, Du XJ, Graham RM, Woodcock EA.
[Full Text](#) [Endnote Reference](#)

Comparative effects of levosimendan, OR-1896, OR-1855, dobutamine, and milrinone on vascular resistance, indexes of cardiac function, and O₂ consumption in dogs.
Am J Physiol Heart Circ Physiol. 2008;294:H238-48 [Training Material](#)
Author: Banfor PN, Preussner LC, Campbell TJ, March KC, Polakowski JS, Reinhart GA, Cox BF, Fryer RM.
[Full Text](#) [Endnote Reference](#)

Substrate specificity of platypus venom L-to-D-peptide isomerase
J Biol Chem. 2006;283:8969-75 [Journal](#)
Author: Bansal PS, Torres AM, Crossett B, Wong KK, Koh JM, Geraghty DP, Vandenberg JJ, Kuchel PW.
[Full Text](#) [Endnote Reference](#)

Containing a structural-maintenance-of-chromosomes hinge domain, has a critical role in X inactivation.
Nat Genet. 2008;40:663-9 [Monograph](#)
Author: Blewitt ME, Gendrel AV, Pang Z, Sparrow DV, Whitelaw N, Craig JM, Apedale A, Hilton DJ, Dunwoodie SL, Brockdorff N, Kay GF, Whitelaw E.
[Full Text](#) [Endnote Reference](#)

The estrogen and c-Myc target gene HSPC111 is over-expressed in breast cancer and associated with poor patient outcome.
Breast Cancer Res. 2008;10:R26 [Journal](#)
Author: Butt AJ, Sergio CM, Inman CK, Anderson LR, McNeil CM, Russell AJ, Nousch M, Preiss T, Biankin AV, Sutherland RL, Musgrove EA.
